PLANCHE E-BOOK

by Calisrama

PRESSES/PUSHUPS/TECHNIQUE

-TUCK PLANCHE
-STRADDLE PLANCHE
-FULL PLANCHE

First of all, I want to thank you for buying my ebook

what we're going to cover in this book

PAGE

3-HOW MANY TIMES TO TRAIN PER WEEK AND HOW HOW TO RECOVER
4-HOW TO THINK IN TRAINING
5/8-TECHNIQUE AND MISTAKES
9/10-TUCK PLANCHE
11/14-STRADDLE PLANCHE
15/18-STRADDLE PLANCHE PUSH UPS
19/21-STADDLE PLANCHE PRESSES
22/24-FULL PLANCHE/PUSHUPS/PRESSES
25/25-HOW TO PROGRESS/TIPS

Don't forget to warm up before your workout, it's an important part of your workout

- neck rotations*
 - hip rotations*
 - side arm raises*
 - arm rotations*
 - dynamic chest*
 - mid back turns*
 - single leg hip rotations*
 - hops on the spot*
-

LET'S START WITH WHAT WE NEED TO GET STARTED

- 1. PULL-UPS 20-15 TIMES*
- 2.DIPS 40-45 TIMES*
- 3. PUSH UPS 40-45 TIMES*
- 4.HANDSTAND (OPTIONAL BUT DESIRABLE)*

HOW MANY TIMES TO TRAIN PER WEEK AND HOW

now I'm going to tell you the best workout regimen in my opinion

MONDAY - Training
TUESDAY - Medium training
WEDNESDAY - Rest and stretch
THURSDAY - Training
FRIDAY - Active rest
SATURDAY - Trainin
SUNDAY - Rest and stretch

This mode works very well for me
but people's bodies are different, you may need a
slightly different regimen.

Try, experiment, and find the perfect workout
regimen for your body

HOW TO RECOVER

Do full rest very infrequently
You should have an active rest day, this can be
as simple as cardio exercise, stretching, or a
small warm-up with a resistance band
This will get the blood flowing to our muscles
and they will recover faster, this is called
active rest

But sometimes it takes a full day of rest
Listen to your body !

HOW TO THINK IN TRAINING ?

Remember this !

1. The first thing you need to know is that you will not get what you want just by training hard, this works in other areas of your life as well.

2. Never tell yourself that you can't always replay in your head that you are strong. Go into a workout with the mindset that you can do what you want, never tell yourself you can't do it today

3. Visualize yourself doing what you want to do in your mind

Example - you are learning Planche, start visualizing in your mind that you are doing Planche

Example - if you already know how to Planche and you want to learn your favorite combination, start visualizing yourself doing that combination !

Train not only your body but your mind as well

TECHNIQUE AND MISTAKES

1 MISTAKE - Grip

Our grip plays a big role in the performance of PLANCHE

An inward grip will not allow us to fully engage our arm and shoulder muscles

Outward grip - will not allow you to fully utilize the muscles of your arms and shoulders

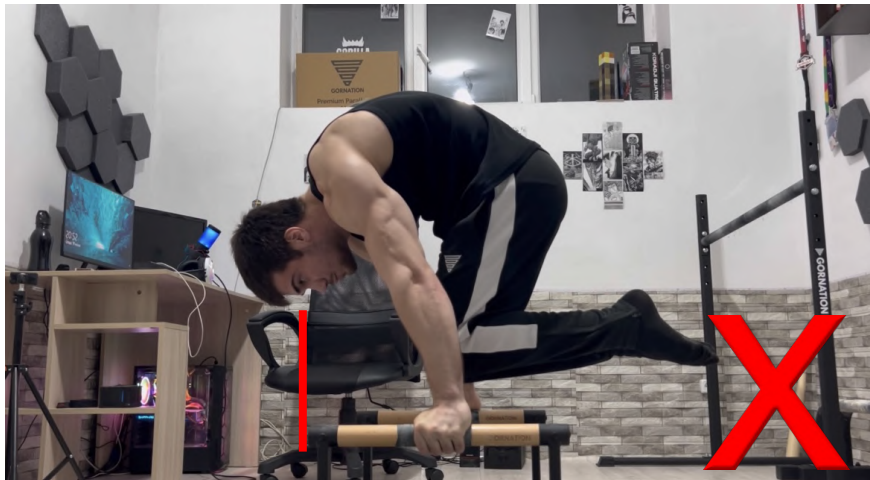

Proper grip - where we can fully engage the muscles of the forearms, hands and shoulders

2 MISTAKE - Head position

The position of our head is responsible for how we will engage the trapezius and back muscles

Head and gaze pointed downward
This will not allow proper use of our muscles, and will impair form and further progress in **PLANCHE** !

Head and gaze upwards - even worse than the 1st option, in general will not allow us to use our back, only arm muscles will be activated

Head and eyes in a 60-50 degree position
The correct variation that will properly engage our back and trapezius muscles

3.CORRECT ENGAGEMENT OF THE BACK MUSCLES

Proper technique and the ability to engage the back muscles properly, plays a role in future progression

Now I'm going to show you some examples

Proper interaction of the back

-Push your chest

-Push your shoulders away from you

-Don't pull your shoulders up

Practice it

Do it in front of the mirror

Do it in Planche Lean, filming yourself on camera

And in the future, you'll automatize it

Normal chest position

Push chest position

MISTAKES IN BACK ACTIVATION

1. Don't hunch over

Our goal is not to hunch over, but to engage the back using the trapezius and the muscles of the shoulders and chest

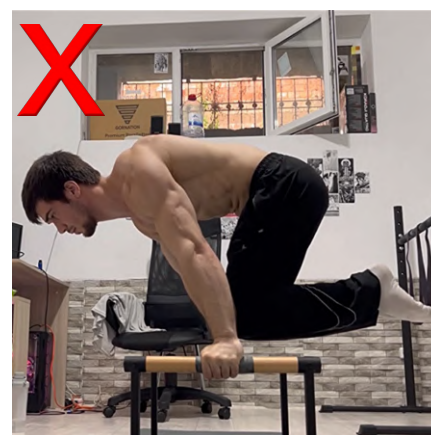

2. Don't fail in the back, you can learn planche with this technique but it will make future progress in other movements more difficult

3. Don't pull your shoulders towards your head
This will not allow proper use of your back and trapezius muscles

TUCK PLANCHE

For those who can't TUCK PLANCHE

We went over the basics of training
Now let's move on to the training itself

TUCK PLANCHE

*Tuck planche is a pretty simple move
A person who has good basic training can do the Tuck
planche without much trouble*

*You must be able to hold TUCK PLANCHE for at least 20-
25 seconds to move on to learning STRADDLE PLANCHE*

let's move on to the TUCK PLANCHE training

EXERCISES

1. Holding TUCK PLANCHE if you already know how
Or attempting to TUCK PLANCHE

TUCK PLANCHE retention 70% of maximum

Example - if your max is 10 seconds, do 7 seconds

5-6 sets

For those who can't TUCK PLANCHE

TUCK PLANCHE attempts 5-6 sets of 6-7 attempts each

Example of attempts

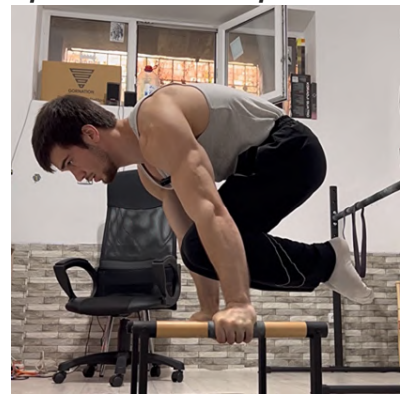

1 position closed L-sit

2 position

3 position Tuck planche

2. Exercise

Planche lean push ups 4 sets 10-15 times

3. Exercise

Planche Lean hold 4 sets 15-20 second

4. BASIC TRAINING

PULL UPS/DIPS/PUSH UPS

PLANCHE LEAN

*This program is for beginners
It is sufficient to learn or increase the retention
time of your TUCK PLANCHE
Also if you have a pretty good basic training you
can add to your program
-HANDSTAND PUSH UPS
-TUCK PLANCHE PUSH UPS
This will accelerate your progress*

*I also want to tell you that if you feel that it is too
hard for you, then reduce the number of sets or
reps*

*If it's too easy, increase the number of sets or
reps*

*Also do not forget about basic exercises such as
DIPS/PULLUPS/PUSHUPS
Do them after the TUCK PLANCHE workout*

CORRECT PLANCHE LEAN

INCORRECT PLANCHE LEAN

STRADDLE PLANCHE

LET'S GET STARTED ON THE STRADDLE PLANCHE

What we need to get started

- Tuck Planche 25-30 sec
- Dips 40 times
- Push ups 40 times
- Handstand push-ups against the wall

1 and the most important exercise is - ATTEMPTS

Now I'm going to show you variations of attempts
your task is to choose the one that is most comfortable
and effective for you, and do it in this way

1 VARIATION

1 position

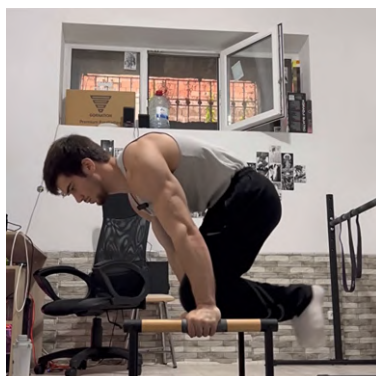

2 position

Your job is to take a forward shoulder bend, swing your feet off the floor and try to hold on

2 VARIATION

1 position

2 position

3 position

Your task is to stand in a closed L-sit position
and from there go into the Straddle planche

3 VARIATION

1 position

2 position

*You can also use this variation
your task is to stand in
straddle handstand, and
move to straddle planche
trying to hold yourself in
this position in the photo*

We've broken down the variations of attempts
Now let's move on to the exercises

EXERCISES

1. Straddle Planche attempts (choose one of 3 variations)
6 sets of 6 attempts
Do one attempt, rest for 5 seconds and do the next one, and so on 6 times
2. Tuck planche hold - 4 sets 15 seconds
3. Planche lean push ups + Planche lean presses - 4 sets

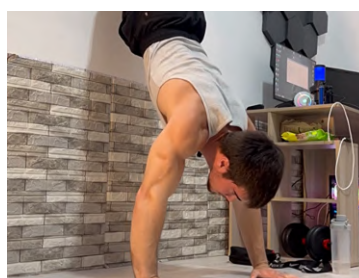

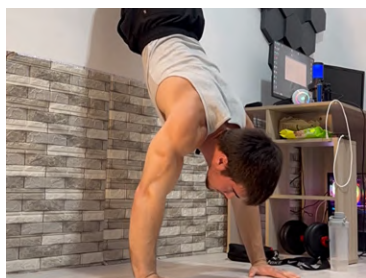

- 1 set 20-20
- 2 set 20-20
- 3 set 15-15
- 4 set 15-15

PLANCHE LEAN PRESS

4. Handstand push-ups against the wall - 4 sets 8-11 times

5. Holding *PLANCHE LEAN* with one leg 4 sets

10 seconds *LEFT* leg raised

10 seconds *RIGHT* leg raised

10 seconds *TWO* feet on the floor

This program is enough to learn STRADDLE PLANCHE

Now let's talk about some of the nuances

How much rest between sets ?

There is no specific rest time, you should rest as much as you need, as soon as you are ready to perform the next set go ahead and start

But most importantly do not let your body rest completely, you should be a little tired before moving on to the next set

Also now I will show you the ideal width of the parallettes to perform PLANCHE

This is also an important part of doing PLANCHE

Let's talk a little bit about the training

*The program is designed for a person with average basic training for Straddle Planche
I will now show you the levels of this program*

lvl 1 - if you are a beginner and this program gives you difficulty and you can not perform it completely, then reduce the number of repetitions by 30%-40%, and continue to train basic movements "DIPS/PUSHUPS/PULLUPS"

lvl 2 - if you are a person with average basic training, then perform this program in the mode I mentioned above, if you feel weak, then reduce the number of repetitions by 20%, also don't forget to train the basics 1-2 times per week 'DIPS/PUSHUPS/PULLUPS

lvl 3 - if you are a person with strong basic training, if this workout is too easy for you, then add the number of repetitions by 20%-30% and add additional exercises to your training based on your experience

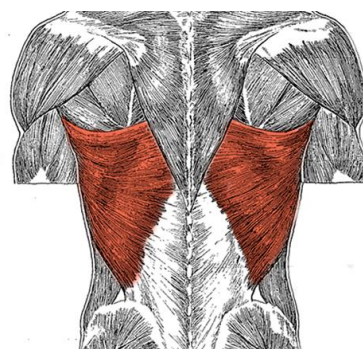

Main muscles that work when performing PLANCHE

Forearm muscles biceps and triceps

Trapezius and broadest muscles of the back

Shoulder muscles
Mainly anterior and posterior delts

STRADDLE PLANCHE PUSH UPS

go to this program if you're able to do

Straddle Planche

- 5 seconds minimum
- 10 seconds good
- 15 seconds no problem
- Push-ups in PLANCHE LEAN without much effort
- Tuck planche push ups 10-15 times

To move on to this program, you should generally have no problem with moves such as (Planche lean push ups, Dips, Push-ups)

1 PART OF THE TRAINING

1 part of the workout should consist of various combos, either short combos or long combos (if you are proficient)

Your task is to use everything in your arsenal, from L-sit to Straddle planche

Example

If you can L-sit , Straddle planche, and Handstand

L-sit , transition to Straddle Planche, back to L-sit and exit to the Handstand

if you can, L-Sit, Straddle planche, Handstand push ups

L-sit , transition to Handstand + Push Up, transition to L-sit , and transition to Straddle Planche

*Come up with combos from elements in your arsenal
Also try to do **NEGATIVE** in Straddle planche.
You don't have to work on cleanliness, work on volume, that's when we do a lot but not cleanly.
This way you will increase your strength and stamina*

2 PART OF THE TRAINING EXERCISES

EXERCISES

1. exercise is "push-ups in Straddle Planche" or "attempted push-ups in Straddle Planche"

*If you have a good enough basic training to learn Straddle Planche push-ups, I think you will be able to do 2-4 straddle push-ups
If that's the case, we'll use our straddle planche push-ups in this exercise.
5-6 sets of max push-ups (no matter what form, just try to do them)*

If Straddle Planche push-ups are very difficult for you, then your task is just to try to do push-ups, the same scheme as in the Straddle Planche program, just try to do 6 sets of 5-6 push-up attempts each

2. Advance Tuck Planche push ups - 70% of your maximum 5 sets
if you don't know what your max is check it before training

ADVANCE TUCK PLANCHE

TUCK PLANCHE

3. Planche Lean push ups - 5 sets

1. 25
2. 20
3. 15
4. 15
5. 20

So you can also use explosive power when performing Planche lean push ups

This is when we slowly go down on the inhale and quickly do a push up on the exhale

Use this for the first 5-10 reps, it will develop your explosive power and give you more strength

Example

1 set of 20 push-ups, do the first 10 push-ups for explosive power and the other 10 as usual

4. Slow push-ups in Tuck Planche 4 sets of 5 times

Explaining how to do - I think everyone knows what negative pull-ups are, there is a similar scheme here

You should slowly come down on the inhale and quickly push up on the exhale using explosive power.

Slowly down and quickly up

*Explosive strength plays a very big role in push-ups
Improve your explosive power*

PUSH-UP TECHNIQUE

*Let's break down the push-up techniques
The first thing we're going to talk about is elbow positioning.
A lot of people have problems with this, so I'm going to show you
the right way and the wrong way*

***Never spread your elbows apart when doing push-ups in
PLANCHE***

- 1- This will make push-ups more difficult***
- 2. It is an injury hazard***

***Try to pull your elbows more towards your body, and towards
your broadest back muscles***

***The same applies in all the other exercises
listed above***

- Don't forget to use your back***
- Get the right grip***
- Look in the right direction***
- And don't put your elbows out to the side***

PUSH-UP TECHNIQUE

Now we're going to talk about using inertia in push-ups

This will be useful for people who are just starting to learn this movement.

The use of inertia can be called "volume"
Our goal is to use our legs when doing push-ups.

Now I'm going to try to explain to you

1. position

2. position

3. position

1. Position - our task when moving down is to release our legs below body level, setting the trajectory for pushing

2. Position - we use our legs by throwing them up while we are about to go up

Learn to use inertia

At the beginning of my workouts, at first I did push-ups with inertia only, but sometimes I tried without it too

Thanks to this, you will learn to understand this movement better, and you'll be able to do more

A lot but not quality = strength + endurance

Strength + Endurance = more but quality

I hope you know what I mean

STRADDLE PLANCHE PRESS

go to this program if you're able to do

Straddle Planche
- 5 seconds minimum
- 10 seconds good
- 15 seconds no problem
- Handstand

*PLANCHE PRESS is not such a complicated movement.
If you have mastered STRADDLE PLANCHE well
enough, you should have no problem learning PRESS*

First, I'll tell you which body groups we should be interacting with.

1. PRESS starts with our legs and lower back and ends with our back, trapezius and shoulders

That is, you should start the movement up with your legs and lower back and finish it with your back and shoulders

1. start with the legs and lower back

2. the second stage is to use the upper back and shoulders

3. finish

*Note that head position and gaze are also very important
Don't forget that*

LET'S GET TO THE EXERCISES

EXERCISES

1 exercise - easy attempts Straddle Planche presses

I'm going to show you a lighter version of the press

1. position

2. position

3. finish

1. You must make a Straddle Planche
2. Start doing press while bending your knees as in the picture

*It's a lighter version of the Strddle Planche Press
It's twice as light as the pure Press*

If you can do it, do these Presses for 20-30 minutes

If you fail, your job is to simply try to perform this movement for 30 minutes

Then after a while, try to come to a cleaner Press in stages !

2 exercise - Not the full Presses

1. Straddle Handstand

2. Negative by 20% to 30%

3. Go back

*One of the most effective exercises for learning Presses and
for improving it
4-5 sets of 5-6 times*

*These two exercises will be enough for you to
learn the press
But let's talk about how your training should go.
1 part of the training, as I said before, should
consist of combos, about 1 to 1.20 hours.
Any combo of elements that you have in your
arsenal.
After that we move on to these exercises.
You can also combine this workout with Straddle
planche push ups*

*Remember that you don't have to perform combos
or exercises perfectly to progress
You can work on volume.
Do as much as you can but not clean.
This will increase your strength and endurance.
And that, you'll be able to perform those
movements clean wich you couldn't do clean*

*Also learn to feel your body
Like I said, if you feel bad, rest or do a lighter
workout and halve the number of reps and
approaches*

FULL PLANCHE

go to this program if you're able to do

-Straddle planche
10 seconds won't be easy
15 seconds won't be a problem
-Any small combos in straddle
planche

The FULL PLANCHE study program is very similar to the
STRADDLE PLANCHE study program
The exercises are almost identical
However, the correct **technique** is very important here, don't forget
that
Let's move on to the EXERCISES

EXERCISES

1 exercise attempts
5 sets of 5-6 times

Attempts are performed as follows

You need to lean forward as in the photo, lift your legs try to hold **PLANCHE**
Perform 1 attempt, rest for 5 seconds and perform the next attempt 5-6 times

Sometimes we try to perform attempts through explosive force
That is, we take a breath and on the inhalation quickly do **PLANCHE**
and back and so on 5-6 times

2 exercises - *PLANCHE* performance from a closed L-sit
5 sets - 5-6 times

1. position

2. position

3. position

3 exercise - *FULL PLANCHE* with one leg

2 sets right leg max hold

2 sets left leg max hold

4 exercise - *Planche lean push ups* + *Planche lean presses* 4 sets

1. 25-25
2. 20-20
3. 18-18
4. 15-15

5 exercise - Advance Tuck Planche push ups and Wide handstand push ups

1. 3 sets ATP push ups 10 times

2. 3 sets WH push ups 5 times

This is quite sufficient for the study of FULL PLANCHE

Don't forget that 1 part of the training should consist of combos

A little bit about the mood

If you feel bad and you don't have the energy for a combo, you can just do this program and that's it

FULL PLANCHE PUSH UPS

Let's talk about PUSH-UPS in FULL PLANCHE

In this case the same program works here as in "STRADDLE PLANCHE PUSH UPS" only we have to perform it in FULL PLANCHE

You can also add such an exercise as FULL PLANCHE PUSH UPS WITH 1 LEG

In general, the programs are the same

We work more on VOLUME, it helps push-ups very well

FULL PLANCHE PRESS

The same can be said for FULL PLANCHE PRESSES, to learn FULL PLANCHE PRESSES you must be able to FULL PLANCHE 5 seconds minimum.

By doing the exercises from the "STRADDLE PLANCHE PRESSES" program you will be able to learn PRESS IN FULL PLANCHE.

You can also add an exercise such as FULL PLANCHE PRESS WITH 1 LEG

I do online coaching, and train my students in the same way and it works very well and I'm sure you can do it, too

LAST PART OF THE BOOK HOW TO PROGRESS FURTHER AND TIPS

The first thing we're going to talk about

1. How to progress further?

2 How to progress in combos?

3. How do you do 5-5-5?

And the other thing

1) Remember what I told you at the beginning of the book, work on your mindset, visualize, and don't tell yourself what you can't do

2) Work more on volume

What is volume? Volume is when we do a lot but not quality.

Volume = Strength and Stamina

Thanks to this you will be able to make

Example

Doing 5 push-ups on the volume for some time, will lead to being able to do 5 clean push-ups in the future. At that point your volume will be probably at 10 push-ups. In the same way you will reach 10 clean push-ups, while your volume will be at 15 push-ups at that point.

And so on. The same scheme applies to Presses and Combos, make a combo that we can't in bad quality for some time, and in the future we will have it in pure form

I think you know what I mean.

Example

If you want to learn 5-5-5, do 5-5-5, without worrying about the form of your push-ups and presses. The main focus should just be to execute the 5-5-5 and the form will get cleaner with time

2. Don't forget good recovery, listen to your body

When you need to rest, take a break, do some stretching, cardio

Never rest sitting on the couch all day, keep your rest day active!

3. Stretch every day, wherever you are in the world

Create a habit of stretching every day, research how to stretch properly on the internet

4 . Training with band

I believe that band will not help you learn a certain skill, but it can help you learn a technique, use it sometimes to understand the correct technique

5. Injuries? If you have an injury, don't let go of your hands, never do nothing, if you have an injury, you must treat it with various exercises

Inactivity will only make it worse
